ABOUT ME

I am a researcher and teacher in computational linguistics (CL) and natural language processing (NLP), with a background in linguistics. My research interests revolve around multilingual NLP, evaluation and interpretability, and NLP applications. I am interested in analysing and improving models for lesser-resourced languages, and in studying how linguistic phenomena interact with language technology. I also have an interest in applying NLP technology to problems within the digital humanities (e.g. historical documents) or computational social sciences.
